Located in the Sandhills of Nebraska, Daniels Manufacturing Co. has been manufacturing the world’s finest livestock handling equipment since 1958.

Priding ourselves in staying on the cutting edge of the livestock handling equipment design and manufacturing. In the past three years, we have sold equipment in eight countries around the world and will continue to offer bold and revolutionary new products relating to livestock, their care, and processing.

As always, all of our products come with a Limited Warranty.

Due to high demand of facility drawings and changes to customer plans, we will be charging a fee for ALL CAD drawings, consulting, and travel expenses.

All designs, drawings, and pictures are the sole property of Daniels Manufacturing Co. and reproduction is strictly prohibited. If our designs or drawings are incorporated into your facility and equipment is purchased or installed, this fee will be waived.

Daniels Manufacturing Co.

The Bud Box and Low Stress Cattle Handling Information

In the feedlot industry today, we are challenged with an increased rate of musculoskeletal injuries that occur as a result of poor facility design and mishandling of the cattle.

As we move forward our cow/calf and feedlot industries are becoming more aware and prioritizing the animal’s well being and care of cattle.

Daniels Manufacturing Co. of Ainsworth, Nebraska has been a progressive and innovative designer of livestock handling facilities across the United States, Australia, Canada, and Europe.

In the U.S, we have designed facilities for Cactus Feeders, Cargill Feedlots, Timmerman Feedlots, and many other feeding operations in South Dakota, Nebraska, Colorado, Kansas, Oklahoma, and Texas.

Danny Daniels, owner of Daniels Manufacturing Company, has attended several Bud Williams Stockmanship Schools on the training of low stress handling of cattle and has sought advice from Bud Williams himself as well as several other animal specialists.

Dr. Tom Noffsinger, Dr. Lynn Locatelli, Dr. Kip Lukasiewicz, Curt Pate, and several others have assisted Danny in the design of facilities to take advantage of voluntary cattle flow.

When designing facilities, Danny Daniels or Dr. Kip Lukasiewicz make personal visits to look the area over and then design the facility to the normal flow of cattle movement. They utilize open facilities and a Bud Box to aid in the voluntary flow of cattle into their double working alley and hydraulic squeeze chute, which are also designed to reduce potential injury to cattle.

While many snake alleys are V-floored and curved, Daniels alleys are straight with adjustable sides (manual or hydraulic). This design is centered around the normal instincts of the animal, which is to go in straight lines and allow them to walk with a normal base.

Cattle also like to see what is pressuring them. The Bud Box and Double Alley are designed with open sides to allow cattle to see the handler and react to their position and movement.

The hydraulic chute has been upgraded several times to incorporate the ideas from many handling experts. It is by far the quietest and most user friendly chute on the market. With its unique squeeze design, neck extenders, and convenient hydraulic operating system, the Daniels squeeze chute is the best on the market.

Please call Daniels Manufacturing Company, Dr. Tom Noffsinger, or Dr. Kip Lukasiewicz with any question you may have on future facility design.

Windbreaks

From Windbreak...
- In Just 5 Minutes
- One Person
- No Tools
- No Bolts

To Shade!

In the tests we’ve run, this panel stops over 95% of the wind velocity and snow does not swirl over the top like a solid windbreak. Cattle will not drift away from protection.

- Heat Flows Up Through Holes
- Stops 79% of Sun

Stationary Windbreak Panel..........................$688.00
Bare Post....................................................$149.00
Post With Shade Latch.................................$204.00

Cost of 60’ Stationary Windbreak..........$7,073.00
8 Panels in a 60’ Section
Posts are 4 1/2” O.D. with 1/4” Wall

The outside frame of these panels is made of 1 1/2” x 3” x 14 gauge tube. The 21% perforated sheets are 20 gauge galvanized-punched full of 1 5/8” holes and corrugated to 3”.
Weight per 12’ sheet is 54 lbs. - 7’ x 12’ complete panel weight is 225 lbs.

Portable Windbreak Panel.................................$650.00

The windbreak panel will hook-up to the Daniels livestock buildings and all of our portable livestock panels. The windbreak panels can be set up in an open area or around a building for added protection.

We have taken the Daniels reputation for durability and reliability to the feeding industry with our new chute. This chute features a wider catwalk, side access door on the top deck, sliding gate at the top of the ramp, and a heavy duty, spring loaded bump plate. This chute utilizes Rumber flooring for greater grip and less chance of injury. We believe that this chute is built to handle many years of heavy duty use and as always comes with our 100% satisfaction guarantee.

Daniels Manufacturing Co.
K-State Facility

This complete research livestock facility was built for the Kansas State University during the summer of 2009. Daniels Manufacturing Co. and Dr. Kip Lukasiewicz designed and manufactured all equipment used in this facility.

The building was designed by Daniels Manufacturing Co. and installed by Green Gable Contracting. The K-State Facility covers 10 acres.
